INFORMATION NOTE

to prepare the training

Documentation resources about the situation in Estonia:

Introduction:

Estonia, the most connected country in the world.

Estonia is considered one of the most digitally developed countries in the world: almost all public services are available online. Voting in local or national elections from your computer, receiving digital prescriptions on your smartphone, starting a business from home, on the internet ... In Estonia, these innovations are part of the normal daily life of citizens. According to the Estonian government, 99% of public services are accessible online. The only administrative acts that require "travel" are weddings, divorces, and real estate transactions.

Since 2002, Estonians over fifteen have been given a digital identity card which allows them to carry out a very wide range of online procedures. In the same spirit, this small Baltic country of 1.3 million inhabitants, decided to create at the end of 2014 an "e-resident" status allowing foreigners to easily set up a business there, or to open a bank account. For Estonia, it's a way to strengthen its attractiveness and stay at the cutting edge of digital.
